RE: DOCKET NO. W-02027A-13-0470

Decision No. 74784

This letter is being sent in response to the ACC staff proposed and recommended changes.

Per Item 5 (page 5 of the Docketed Order)

- "Dateland should monitor the number of gallons of water pumped and sold to determine the amount of non-account water for one year and coordinate its readings of well meters with its readings of customer meters each month, and keep records on any non-account water it uses for legitimate purposes. The Company should file with Docket Control, within 13 months of the Decision's effective date, as a compliance item in this docket, a water use data report reflecting the monitoring results. If the reported water loss is greater than 10 percent, Dateland should prepare a report containing a detailed analysis and plan to reduce water loss to 10 percent or less. If the Company believes it is not cost effective to reduce the water loss to less than 10 percent, it should submit a detailed cost/benefit analysis to support its opinion. The water loss reduction report or the detailed analysis, whichever is submitted, should be docketed as a compliance item file with Docket Control, as a compliance item in this docket, within 13 months of the Decision's effective date."
- DPSC is filing paperwork to complete our compliance issue shown in the above paragraph.
- Attached is a record of water usage for both the well meter and the customer's meter for the past twelve (12) months, a record of the non-accounted water used for legitimate purposes for the past twelve(12) months, and a short explanation pertaining to high usage in 2 months and a negative reading in 1 month.

RE: DOCKET NO. W-02027A-13-0470

Decision No. 74784

- * This is to explain that we had 2 months of extra water loss. Those months were December 2014 when we had a break in a water line which resulted in a major loss, and in February 2015 we had another line break plus we had construction ongoing for a new maintenance building that month.
- * For the October 2015 water we are showing that we accounted for more water than we pumped but we had a couple different things happen that month.

The first difference was a matter of a customer being turned off for lack of payment but because of a defective value they were still receiving water and it was being metered. When the incident was discovered they were billed for the entire amount for the month of October instead of being split between September and October.

The second item was that on the day we read all the meters the maintenance crew was cleaning the RO filters and had the system down so we had not filled our storage tanks as they are usually done prior to the meter reading.

* The form made up for our accounted water was done based on the data given to the operator and manager at the time of the new plant installation.
